Suryakanti Foundation Indonesia

Child Development Monitoring for Prevention Disability
Lack of knowledge on child development exposes children to higher risk of developmental delays & disability.

Suryakanti Epidemiological Study among children under 5 shows in Indonesia:

1 out of 3 children is detected with mild developmental delay
1 out of 11 children are at high risk for disability
Suryakanti's CHILD DEVELOPMENT MONITORING TOOLKIT provides a simple home-based monitoring CHART and STIMULATION MANUAL for mothers and village health workers to track child development and identify delays early.
What we want
Reducing impact of disability through early detection & intervention

What we do
1. Adapt & provide easy to use child development monitoring tool
2. Train health workers & preschool teachers to
   - use the development monitoring tool
   - teach mothers how to monitor development, detect delays & give stimulation

What we have achieved so far

~7,000 TOOLKITS DISTRIBUTED
1,000+ TRAININGS CONDUCTED
3,600+ PEOPLE TRAINED
~80,000 MOTHERS & CHILDREN REACHED
Transfer Mechanism

Replicable in developing countries with:
- High child population
- Low education level
- Moderate poverty
- Insufficient health infrastructure.

Capacity building:
- Toolkit adaptation
- Training of Trainers
- Evaluation design

Our needs

We’re looking for funders and implementers in other developing countries that we can support to:

- adapt the monitoring tool to their local context
- train local health workers and mothers
